

Available Job Opportunity: CCS Capture Facilities Project Manager

Full-time role in Allen, TX, with some travel required.

CapturePoint is preparing for rapid, significant growth in our Carbon Capture and Sequestration (CCS) operations. We are seeking an experienced Project Manager to support the company with new CCS capture facilities and carbon management development projects. The ideal candidate will have 10+ years of oil and gas facility project management and construction experience; specialized knowledge of CO₂ capture technologies; thorough knowledge of relevant construction standards and regulations; and be capable of leading large scale complex projects.

Duties and Responsibilities:

- Manage all phases of large-scale CCS projects, from pre-development planning to final construction and commissioning
- Provide budgetary costs and schedules for preliminary capture projects
- Lead and manage engineering, procurement and construction of capture facility projects as directed by the leadership team
- Direct project controls and supply chain to ensure project schedule and budget while tracking progress
- Manage all subcontractor performance, scheduling, contract compliance, and quality assurance
- Oversee all on site execution and construction management teams
- Provide project execution strategies and assist in key decision making to construct cost effective projects
- Lead technical support for the commercial team during commercial negotiations
- Communicate and collaborate with emission stakeholders for seamless project integration
- Work with multi-disciplinary teams, including development, operation, subsurface, and regulatory expertise
- Establish leadership as company subject matter expert for carbon capture technology

Specialized Knowledge Requirements:

- Familiarity with ASME, NACE, API, and ASTM and other specifications, standards, and recommended practices typical in the oil and gas industry
- Working knowledge of applicable CO₂, CCS, and carbon management regulations as well as federal (such as EPA) and State oversight agencies
- Understand industry safety standards and best practices established by OSHA, HSE and ISO

- Experience in CO₂ facilities in oil and gas applications required
- Good working knowledge of metering, rotating equipment, dehydration units and H₂S treating in CO₂ applications

Skills and Abilities:

- Creative thinking with strong analytical and troubleshooting skills
- Must be flexible and able to work effectively in a dynamic environment
- Must possess well-developed interpersonal skills to manage, lead, and direct internal and third-party personnel
- Self-motivated and a strong communicator
- Capable of representing the company effectively to the local community in support of the CCS Commercial team

Qualifications:

- Minimum of 10 years of relevant job experience
- Bachelor's degree in engineering, construction or project management, or equivalent from an accredited institution
- Previous successful execution of major capital projects
- A proven track record in managing engineering, procurement and construction
- Ability to travel as required by development projects
- Valid documentation to work in the United States required (proof of US citizenship, permanent residency, or a relevant, valid, unexpired work visa or permit from an authorized US government agency)

Benefits:

- Competitive salary, bonus and 401(k) match
- Comprehensive health package (medical, dental, and vision)
- Traditional (40 hours/week onsite), Work from Home Friday, or 9/80 work schedules are available

Apply by sending your resume to jobs@capturepointllc.com. Indicate that you wish to be considered for the CCS Capture Facilities Project Manager position. We will contact you if you qualify for an interview. No phone inquiries please.
